

Anne Heggli holds a B.A. in International Relations and Spanish, a M.S. in Water Resource Management, and she is working towards a Ph.D. in Atmospheric Science with an application-based approach to work in the science-operations-communication nexus. Ms. Heggli is developing an empirically based Snowmelt Risk Advisory (SRA) framework that considers the likelihood of snowmelt runoff through risk quantification. She has experience solving problems by applying real-time data collection systems, improving observations, and working with operational hydro-meteorological agencies across the United States and into Latin America.
