

My name is Dylan Guerin and I am a fifth year graduate student at UNLV in the lab of Dr. Kelly Tseng. Our lab studies regeneration and the mechanisms controlling that process in the African clawed frog, *Xenopus laevis*. My project focuses on determining the role of Notch signaling in *Xenopus* embryonic eye regrowth. Additionally, I currently teach introduction to biology labs and MC the trivia at UNLV science café. After I graduate I want to teach science.
