

Helen Kesting

University of Nevada, Reno

Helen (she/her) grew up in Washington state and earned her B.S. in Environmental Science and Terrestrial Resource Management from the University of Washington. She is currently a master's student in Ecology, Evolution, and Conservation Biology at the University of Nevada, Reno studying the seasonal partitioning of precipitation using isotopes. This work helps us understand how future changes in precipitation will affect water resources and carbon cycling. Helen's career goal is to use geospatial data to solve practical environmental problems. In her free time, she enjoys mountaineering, caving, and skiing.
