

Maxwell Stonham

Bachelor of Science in Electrical Engineering

University of Nevada, Las Vegas

As an electrical engineering major in my senior year, I have accumulated knowledge from multiple different disciplines within my major and have found that I am most interested in topics relating to signal processing and embedded systems design. Before deciding on EE, I had heavily leaned towards pursuing something more biomedical related but shortly learned that EE can play a large role in that field as well. I am open to learning new experiences that may one day allow me to do research that makes use of biomedical instruments (such as BCI's, MRI's, X-ray's), whether it would be through devices that are more local to Earth or devices used for space research.
