My name is Carolina Mena and I am a junior pursuing a bachelor's in history at Nevada State College. I have a strong background in technology and have worked in IT. I have an associate's degree in computer programming as well as cyber defense. I also have an associate's degree in humanities, philosophy, & arts, math & science, and social & behavioral studies. I am passionate about learning and I enjoy studying various subjects.

My goal is to finish my bachelor's degree in history and work towards a PhD. I aspire to work in a museum in a curator or director role. I believe that preserving history is incredibly important.

My internship role is systems engineering knowledge capture. The objective of the digital transformation project is to capture systems engineering subject matter expert knowledge. I am excited to contribute to this project and I look forward to working with NASA.
