

Hello! My name is Dan, and I'm currently a fourth year student at the University of Nevada, Reno. I'm studying electrical engineering as my major, and my main research interest is in electronics. Some of my career aspirations are to go into the semiconductor/chip engineering industry, or work in fields related to aeronautical engineering and space exploration. The project that I will be working on for the school year will be on wireless power transfer technology, and the two main areas of this project that I'll be focusing on are developing electrical devices for near- and far-distance wireless power transfer purposes, while exploring potential applications in real-world scenarios.
