

Adam Clurman will be graduating with a B.S. in Environmental Sciences from Nevada State College in the Spring of 2023. After graduation, he aims to work in industry where he can actively make contributions to wastewater management and material research/development. He has been a worker at the Desert Research Institute since 2019, where he contributed to three papers, has a pending material methodology patent and is completing more projects. His current research focuses on the use of biochar for salt removal from aqueous solutions. This project aims to evaluate whether biochar can be used as a precursor for desalination plants.
