

Hello, my name is Jonathan Le. I am currently in my second year as a Pre-professional Biology and Honors College student at UNLV. I enjoy going to the gym, rock climbing, and trying new types of food. Aside from that, I really enjoy collecting cards, specifically Pokemon cards as it has always been a childhood nostalgia, opening up packs as a kid with my dad. As an aspiring dentist, I look forward to being able to promote dental health while also building lasting positive relationships with patients. Overall, my research involves synthesizing DSTP photochemically in applications that involve fire protection.
